Not illustrated. 1920 Excerpt: .91-155. reach their maximum brightness only two colors were used. These colors were obtained by means of gelatine filters. The experimental procedure was the same as was employed for the determination of the time required for the colors to reach their maximum saturation, with the exception that the closed sectors of the episkotister used to vary the brightness of the standard stimulus were made black instead of the gray of the brightness of the color. The maximum brightness of each of these two colors was attained in approximately 0.130 seconds. Berliner also mentions the irregularities in the rates of development of the color sensations. This was especially true of their rise in saturation. (4) Charpentier. Charpentier¹⁶ determined the effect of difference of intensity on the time required for white light to produce its maximum effect in sensation. Working with four intensities of light, he derived the...
