Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 Excerpt: .a cut-out for each lamp or each series of lamps should be provided. The branch conductors should have a carrying capacity about fifty per cent. in excess of the normal current required by the lamp. They should be furnished with only such resistances or regulators as are enclosed in non-combustible material, such resistances being treated as sources of heat. Incandescent lamps, however, should not be used for this purpose. All such arc lamps should be supplied with globes and protected by spark arresters and wire netting around the globe. Outside arc lamps should be suspended at least eight feet above sidewalks. Inside arc lamps should be placed out of reach or suitably protected. Lamps when arranged to be raised or lowered, either for carboning or other purposes, should be connected up with stranded conductors from the last point of support to the lamp, when such conductor is larger than No. 14 B. S. gage. Economy and compensator coils for arc lamps should be mounted on non-combustible, non-absorptive, insulating supports, such as glass or porcelain, allowing an air space of at least one inch between frame and support, and should in general be treated as sources of heat. Vapor Lamps. Enclosed Mercury Vapor Lamps. Lamps of this kind (see page 167) should have cut-out for each lamp or series of lamps except when contained in single frame and lighted by a single operation, in which case not more than five lamps should be dependent upon single cutout....
