

Textbook of elementary biology

Filesize: 7.1 MB

Reviews

Completely essential read pdf. It is definitely simplistic but shocks within the 50 % of your book. Its been designed in an exceptionally straightforward way which is simply following i finished reading through this publication in which actually changed me, change the way i believe.
(Damon Friesen)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 70 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1893 Excerpt: . . . the urinary organs consist of a pair of kidneys, which are generally placed in the posterior part of the abdominal cavity. Each kidney may be considered to consist of a collection of nephridia or segmental organs (similar to those seen in the earth-worm). The kidneys pour their urinary secretion into a pair of ducts or ureters, which run down, one from each kidney to open into the bladder, into a sinus common to the genital and the urinary products, or into the cloaca. Fig. 86. --Diagrammatic representation of the segmental organs (nephridia) in a segmented Worm (after C. Semper). Ds, septum; Wtr, ciliated funnels of nephridia. The ureter develops on the surface of the embryo as a groove which later becomes formed into a canal, so that although the nephridia or tubules do not open to the exterior, they open into a canal which in development is pinched off from the exterior, its walls being epiblastic in origin. In connection with each tubule or nephridium, a pouch appears, into which a coil of arterial blood vessels (glomerulus) becomes pushed, the pouch with its blood vessels being known as the Malpighian body. As a rule the ciliated funnel, which was present during development, becomes completely closed. The walls of the tubule for a considerable part of their extent are lined with glandular cells, and are richly supplied with blood vessels. The urine is derived partly from the blood as Fig. 87. --Diagrammatic representation of the kidney (segmental...).
