As the resistance of the conductor is proportional to its length (Art. 2292), then, by formula 406, the resistance of 1,000 feet of the iron wire is  $85.12 \times 1,000,0,0, . r = rU n = 16.1212$  ohms. Ans. 5,280 Note.--In the two cases, as the diameters of the wires are equal, their sectional areas are also equal; therefore, the sectional areas can be neglected in solving the problem. See Art. 2293. (1166) The sum of the currents in the three branches is  $7.7 + 23.9 + 15 = 46.6$  amperes. The difference of potential between the point where the branches divide and the point where they...
